December 15, 2006

We are pleased to announce the availability of Computron Software Enterprise Release 10.0. This release includes full cradle-to-grave auditing capabilities for our General Ledger (JCM). In addition, the JCM module includes a new e-cellerator which allows for the inspection and approval of transactions via the Internet. These and other enhancements to our systems will enable users to navigate through the increasing complexities associated with compliance regulations. Attached to this email is the 10.0 Management Overview, which details the additional functionality incorporated in this release.

The first version of the 10.0 release will be 10.0.0, which is platform and RDBMS specific. The release is for the Solaris platform and introduces the port to Solaris 2.10. The certified RDBMS is Oracle, and includes support for version 9i and the new certification for version 10g. Vision implementations are also supported. Future patches will expand on the certification of additional platform/RDBMS combinations. Please refer to the **Management Overview** (http://www.computronsoftware.com/pdf/management_overview_10.0.pdf) for further details concerning support matters.

If you have not already done so, please contact your Engagement Manager or Computron Software Professional Services to schedule your upgrade and conversion to the 10.0 release.

Thank you for your continuing use and interest in our Enterprise Financial solutions.

Best Regards,
The Computron Software Team
